Artifact 1: Get Stream Sniped - Speedrun

Overview (1 - 2 paragraphs)

You are playing as a streamer named Daisy. She's getting ready for a stream later during the day. However, among her fans, there is a stalker who's trying to kill her. The stalker disguises as her brother to try and break into her home. You have to try to fend off the stalker using a gun to kill it. But beware, it's not just any ordinary stalker...

The first few scenes introduce the story and some of the mechanics to the game. Then, you get a call from Daisy's manager informing her that her stream is going to start soon. After the call, a minigame takes place, where you have to collect the unbroken hearts and get a score of 200. Once you get a score of 200, Daisy finishes her stream and leaves her room. She hears someone knock on the door and goes to answer it. There, she sees her brother trying to enter. She is immediately suspicious of him and goes to check his location. After finding out the person at her front door isn't her brother, she goes to her closet to grab a gun. Her "brother" breaks into her home and turns into a monster. You have to use the gun to try and kill the monster. Once you kill the monster, Daisy leaves her home and stays with her real brother at his house (the good ending). However, if you get caught by the monster, you die, accomplishing the monster's goal (the bad ending).

Technology (1 - 2 paragraphs)

'Get Stream Sniped - Speedrun' is built using Python, PyGame and gamelib.py. The logic of the program involves using separate "game loops" to represent each scene in the game. The stream minigame used lists to store the hearts falling down. Parts of the game, such as using the gun to shoot, were used with the game.score mechanic, which can be found in gamelib.py.

Some spritesheets and graphics were handmade using Piskel, while the others were found on the internet. All objects such as Images and Animations were integrated into the game using classes found in gamelib.py. There were various functions that were created to move certain animations, such as Daisy and the monster.
